

CNC Stone Processing Center

+90 542 293 19 01
Cumhuriyet Mah. Çalikağa Sok. No:9 Kat:3 D:6
Silivri/İstanbul · Türkiye

The CNC stone processing center is a multi-axis, high-precision production system designed for the cutting, profiling, edge grinding, and surface finishing of natural and composite stones. Its multi-axis structure allows complex edge profiles, curved forms, and three-dimensional details to be machined with high repeatability. Advanced CNC control ensures quality in jobs requiring tight tolerances while shortening production times.

Water-cooled machining and diamond tools deliver clean and efficient results on stones of varying hardness such as granite, marble, quartz, and porcelain. Automation reduces manual labor, lowers waste, and significantly increases efficiency in mass production. It is an ideal solution for kitchen countertops, bathrooms, facade cladding, and architectural and decorative stone applications.

By adapting to different stone types and sizes, it offers the flexibility to produce a wide product range with a single investment. Concept Solutions provides technical consultancy and support throughout the entire process, from machine selection to commissioning.
