Helios Quartz UV and IR (infrared) quartz lamp systems are high-efficiency solutions developed for industrial drying, curing, photopolymerization, heating, and disinfection applications. IR lamps provide fast, targeted heat transfer to dry paints, coatings, and inks in a short time; their quartz construction offers high radiant efficiency and durability. UV lamps enable the instant hardening of UV-curable inks and varnishes; they are also used in sanitation and disinfection applications.

High radiant efficiency and long operating life both increase production speed and keep energy consumption under control. Thanks to their modular design, they can be easily adapted to existing production lines and different process requirements. They are a reliable solution across a wide range of sectors, primarily glass, printing/screen printing, automotive, and general industry.

Helios Quartz (Italy) products, backed by decades of experience in quartz and lamp technology, are supplied with the assurance of Concept Solutions and engineered according to the application.
